## Developer Track

# REQUIREMENTS

Coding experience  
Github account  
API tokens

## WHY ATTEND?

You're already building. This track is for developers who want to move beyond basic implementation — into agent architecture, evaluation frameworks, and responsible AI engineering that holds up in production.

## WHAT YOU WILL LEAVE WITH:

- An understanding of how to prepare your development environment for AI
- A working ReAct agent that utilizes external search tools
- Langfuse and Dagster set up to trace and score agent performance end-to-end
- AI agents securely bridged to sensitive business data with ContextForge MCP
- An understanding of how Open Thought helps curate your training dataset
- An introduction to Cognitive AI — a unique architecture that emulates human learning and thinking
- A personal framework for taking responsibility for ethical AI use and skill development in a fast-paced world
- The knowledge to turn AI-generated code into software that you can trust
- A clear view of AI's future: less training data, local training and running, transparent by design

## Summer AI Intensive 2026

# June 22-24
